

OceanWatch Australia works with the seafood industry and the community to ensure Australia's marine environment is healthy, productive, valued and used in a responsible way.

TAngler bins

Tangler bins are designed as a practical environmental solution for the recovery of lost recreational fishing line that litters recreational fishing hotspots.

An accompanying education/information campaign aims at encouraging the prevention of fishing litter and associated impacts on wildlife and habitat, including:

- Death and injury to fish, birds and other wildlife
- Fish habitat degradation
- Pollution of the marine and coastal environment
- Reduced quality recreational fishing experience.

OceanWatch has partnered with many groups including Gladstone Ports Corporation, the NSW recreational fishing industry, DPI Fishcare Volunteers, local fishing clubs, bait and tackle shops and local councils to install TAngler bins.

Since 2006, more than 350 TAngler bins have been installed in key coastal locations in Victoria, NSW and Queensland where lost and littered fishing line is most prevalent. Since commencement, the project has collected more than 10 tons of discarded fishing line.

OceanWatch continues to seek funding to target specific hot spots however interested Councils, land managers or volunteers can also request to purchase individual bins direct from us.

TAngler bins cost \$125 plus postage (worked out on your order size and location) plus GST. Cost includes postage of constructed bins, generic TAngler sticker with space at base for additional logos, stainless steel bracket attachment mounts to attach to a pole.

An Information leaflet, promotional posters for bush shelters and a huge 1.8m unit for promotional use (see below) are also available for functions at minimal cost.

Please inquire (02) 9660 2262.
